this book explains how the brain interacts with the social world and why stories matter how do our brains enable us to tell and follow stories and how do stories affect our minds in stories and the brain paul b armstrong analyzes the cognitive processes involved in constructing and exchanging stories exploring their role in the neurobiology of mental functioning armstrong argues that the ways in which stories order events in time imitate actions and relate our experiences to others lives are correlated to cortical processes of temporal binding the circuit between

action and perception and the mirroring operations underlying embodied intersubjectivity he reveals how recent neuroscientific findings about how the brain works how it assembles neuronal syntheses without a central controller illuminate cognitive processes involving time action and self other relations that are central to narrative an extension of his previous book how literature plays with the brain this new study applies armstrong's analysis of the cognitive value of aesthetic harmony and dissonance to narrative armstrong explains how narratives help the brain negotiate the neverending conflict between its need for pattern synthesis and constancy and its need for flexibility adaptability and openness to change the neuroscience of these interactions is part of the reason stories give shape to our lives even as our lives give rise to stories taking up the age old question of what our ability to tell stories reveals about language and the mind this truly interdisciplinary project should be of interest to humanists and cognitive scientists alike

narratives enable readers to vividly experience fictional and non fictional contexts writers use a variety of language features to control these experiences they direct readers in how to construct contexts how to draw inferences and how to identify the key parts of a story writers can skilfully convey physical sensations prompt emotional states effect moral responses and even alter the readers attitudes mind brain and narrative examines the psychological and neuroscientific evidence for the mechanisms which underlie narrative comprehension the authors explore the scientific developments which demonstrate the importance of attention counterfactuals depth of processing perspective and embodiment in these processes in so doing this timely interdisciplinary work provides an integrated account of the research which links psychological mechanisms of language comprehension to humanities work on narrative and style

stories can inspire love anger fear and nostalgia but what is going on in our brains when this happens and how do our minds conjure up worlds and characters from the words we read on the page rapid advances in the scientific understanding of the brain have cast new light on how we engage with literature this book collaboratively written by an experienced neuroscientist and literary critic and writer explores these new insights key concepts in neuroscience are first introduced for non specialists and a range of literary texts by writers such as ian mcewan jim crace and e l doctorow are read in light of the latest scientific thought on the workings of the mind and brain brain mind and the narrative imagination demonstrates how literature taps into deep structures of memory and emotion that lie at the heart of our humanity it will be of interest to readers of all sorts and students from both the humanities and the sciences

an investigation of the emotional power of narrative that illuminates the relationship between the human brain and the stories we tell as

humans we think in stories stories that allow us to feel and share emotions in order for this phenomenon to work our brains and the ways in which we tell stories must be attuned to each other but how exactly does this happen tapping into the essence of thinking in stories fritz breithaupt draws on the latest scientific research including a retelling study comparable to the telephone game with more than 12 000 participants and experiments in which chatgpt functions as storyteller this wide ranging study includes analyses of political history novels fairy tales and everyday office gossip proposes a new theory of narrative that focuses on emotions and affects and hypothesizes on the evolution of narratives among our hominid ancestors redefining us as beings who anchor ourselves in the world through narratives breithaupt introduces a new kind of psychology that cuts to the core of how and why humans feel the need to tell stories

this book presents a unique and intuitively compelling way of understanding how humans think it argues that narratives are the natural mode of thinking that the urge to think narratively reflects known neurological processes and that although narrative thinking is a product of evolution it enables us to transcend our evolutionary limits and actively shape our own futures in remarkably engaging language the authors describe how the currency of neural activity in the brain is transformed into the qualitatively different currency of conscious experience the everyday purposeful story like experience with which we all are familiar the book then examines the nature of thought and how it leads to purposeful action discussing among other concerns how memories about the past perceptions about the present and expectations about the future are structured as plausible coherent narratives by causation purpose and time and how errors are introduced into one's narratives both naturally and by other people often intentionally and how those errors bias one's expectations about the future and the actions taken or not taken as a consequence each of these discussions is followed by a commentary that ties them to interesting facts and questions from throughout the physical and social sciences the book is concluded with the argument that narrative thought is what is meant when one uses the word mind

wer in geschichten verstrickt ist lebt intensiver ich erzähle also bin ich doch nicht nur das eigene leben wird als narration prägnanter mittels erzählungen gelingt es uns auch die erfahrungen eines einzelnen menschen zu solchen von vielen anderen zu machen dazu müssen unsere geirne und die weisen wie wir geschichten erzählen aufeinander abgestimmt sein doch wie genau geschieht das fritz breithaupts brillantes buch unternimmt eine Neubestimmung des menschen als narratives wesen narratives denken so zeigt er wird stets mit spezifischen emotionen belohnt und das heißt wir leben wie wir leben weil wir diesen belohnungsmustern folgen in narrationen kann darüber hinaus aber auch immer alles anders kommen und ebendies erlaubt uns den aufbruch zu neuen ufern
